6.3. Logistic support.....	32
6.4. Defence infrastructure.....	33
6.5. Military standardization, certification and codification	34
7. Conclusions	34
8. Where to focus our efforts.....	35

1. INTRODUCTION

The 2011 Annual report on the status of Defence and the Armed forces of the Republic of Bulgaria was elaborated on the basis of article 23 of the Law on Defence and the Armed Forces of the Republic of Bulgaria. In addition to the above-quoted legal commitment, during the past year quarterly reports on the activities of the Ministry of Defence were published as well.

The political efforts in the sphere of defence in 2011 were concentrated on fulfilling the aims, objectives and priorities set in the National Security Strategy, the National Defence Strategy, the White paper on Defence and the Armed Forces of the Republic of Bulgaria, the Plan for Development of the Armed Forces (PDAF) and the Investment Plan-Programme of the Ministry of Defence – 2020 (MoD IPP - 2020).

In 2011 the national defence policy of the Republic of Bulgaria was carried out in a dynamic and contradictory international security environment. In order to stabilize the situation in Afghanistan, Libya, the Middle East and other world crises regions, it was necessary to engage civilian and military capabilities and resources of many different countries, the UN, NATO, the EU and of other organizations.

The most important achievement in 2011 was that the focus of the defence policy efforts was categorically put on the combat capabilities of the Bulgarian armed forces – training, participation in missions and operations abroad and modernization.

In total during the year, 197 exercises were conducted, including 28 large-scale international joint exercises, which is 34% more than 2010. In order to improve the level of training and the interoperability of the Armed forces, the effective use of the Bulgarian military facilities together with the United States continued throughout the year.

In accordance to the approved by the Council of the Ministers scenarios of the Armed Forces, the MoD elaborated a “Methodology for Wartime Planning” document, drafted a new “State Wartime Plan”, and a draft “Strategic action plan of the Armed Forces of the Republic of Bulgaria”.

All planned activities for 2011 regarding the transformation of the organizational structure and personnel strength of the Armed Forces, as well as with respect to the development of a single command and control (C2) system both for peacetime and for times of crises were successfully fulfilled.

The strategic level C2 was restructured as a result of which a new fully integrated MoD was introduced. An integrated operational level C2 was formed on the basis of the newly established Joint Forces Command and the Services’ Commands. An achievement was the introduction of the new command structures and the achieved increase in the efficiency, compatibility and synchronization in the C2 system. The command structure parameters set in the White paper on Defence and the Armed Forces were achieved. Implementing the “Top-down” approach in conducting the reforms, the beginning of the reorganization of the units at the tactical level planned for the current year were initiated as well.

The improvement of the defence legal framework continued by adopting the Law on Military police¹ and the Law on the Reserve of the Armed Forces of the Republic of Bulgaria². A draft Law on Military Intelligence was also elaborated.

An important priority in 2011 was the modernization of the Armed Forces conceptual and doctrinal base as a key imperative of the capabilities. A precise and clear hierarchic structure of the doctrinal documents analogous to the one in NATO and EU was endorsed. A coherent system for development, coordination, approval and review of the Armed Forces' doctrines was established. The most important doctrine – the “Armed Forces Doctrine” was approved as well. It is the capstone document for the development of the whole set follow on conceptual and doctrinal documents.

In 2011 the operational concepts of the MoD IPP – 2020 “Thirteen priority investment projects” were also developed.

With respect to the modernization of the Air Force, the projects for acquisition of C-27J “Spartan” aircraft and of AS 532 AL “Cougar” helicopters were successfully completed. The Naval Forces took delivery of three AS 565 MB “Panther” helicopters and introduced the EKRAN – “Coastal surveillance system for shipping and maritime border control” and the Land Forces acquired new automobile equipment under the contract with Daimler Chrysler.

The MoD actively participated in the formulation of NATO and EU security and defence policies and provided an adequate contribution towards their implementation through the country's participation in expeditionary operations, different defence initiatives and the process of transformation and reforms. The rotations and sustainment of the of the Bulgarian Armed Forces contingents in Afghanistan, Bosnia and Herzegovina and Kosovo were carried out in time. On a short notice a Bulgarian Naval Forces combat frigate was deployed in the NATO-led “United Protector” operation in Libya.

2. DEFENCE POLICY PRIORITIES AND APPROACHES

2.1. DEFENCE POLICY AND THE SECURITY ENVIRONMENT

Among the factors exerting major influence upon the security environment in 2011 were the conflict in Afghanistan; the Middle East and North Africa crises; the world financial and economic crisis consequences; the asymmetric risks and threats - primarily trans-border terrorism; the information and energy security and the demographic, ecological and climatic challenges. Parallel to this the cooperation among countries, international partnership and the comprehensive approach in dealing with the common problems had a major importance for guaranteeing Global security and preventing large-scale military conflict.

The asymmetric risks and threats influenced the security environment in 2011. International terrorism remained one of the most serious threats. The world economic and financial crisis continued to exert negative influence.

Regionally, the relatively stable security environment in the Western Balkans was due to the international community's commitment to settle the problematic issues. It was also due to the ongoing NATO and EU operations and to availability of common priorities - the development of regional cooperation and willingness on part of the Western Balkan nations towards NATO and EU integration. Nevertheless, ethnic confrontation, difficulties in building statehood and religious radical structures' activities exerted negative influence upon the security environment.

The Black Sea Region security environment was formed, among other, under the influence of its growing geo-strategic importance, the presence of “frozen” conflicts, the activities of terrorist and paramilitary structures, ethnic and religious confrontation, the availability of prerequisites for

¹ Promulgated in State Gazette on 24.06.2011

² Promulgated in State Gazette on 09.03.2011

radiological and chemical weapons proliferation, etc. The overall security environment in the region was favourably influenced by the efforts of the Black Sea countries, including the Republic of Bulgaria to develop a better regional cooperation and cooperation with NATO and the EU.

The national security of Bulgaria, although indirectly, was also influenced by the ongoing processes in the region of Central Asia, primarily - the spread of radical religious ideas, illegal drug trafficking and other trans-national risks.

In Afghanistan, the threat levels remained high due to rebel groups' terrorist activities whose actions were directed towards discrediting the Central Government of Afghanistan and to counteract the International Security Assistance Force in Afghanistan's (ISAF) efforts to stabilize the country. The successful handing over the responsibilities for maintaining public order to the Afghan national security forces and implementation of the National reconciliation and reintegration program remain to be challenges to the successful stabilization of the country. The risks and potential threats to ISAF security, including to the Bulgarian expeditionary contingent remain high.

The security environment in the Middle East and North Africa throughout the year was influenced by the existence of different conflicts, unstable political system changes in a number of countries and radical terrorist and extremist group's activities. The crisis processes in the region established prerequisites for an increasing influence of organizations sharing Al Qaeda's ideology and the legitimatization of different Islamic movements on the political scene. The regime changes in a number of countries in the Middle East and North Africa and the difficulties in restructuring their political system, the terrorist and extremist group's activities, as well as the emerging refugee flows increased the risks to the security and the interests of Bulgaria and its citizens.

As a whole, the developments within the overall security environment indicate that new conflicts and crisis situations in different parts of the world could arise in the future which may threaten the security and national interests of Bulgaria. This requires the maintenance of defence capabilities consistent with the risks and threats to the national security.

As a member of NATO and the EU, the Republic of Bulgaria contributes to the international efforts to maintaining peace and stability in the crisis regions. Due to its consistent good neighbourly policy, Bulgaria continued to play an active role in developing the regional defence cooperation.

2.2. DEVELOPMENT AND FUNCTIONING OF THE MOD AS A MODERN INSTITUTION OF A DEMOCRATIC STATE

The improvement of the defence management process continued to be among the leading priorities for the MoD throughout the year. The legal base for management of the Integrated Ministry of Defence (IMoD) and of the Armed forces was improved by the implementation since March 2011 of the amended Law on defence and the Armed Forces of the Republic of Bulgaria. The MoD Rules and regulations (in force since 1st August 2011) removed any duplication of functions and tasks and restored the synchronization between the military and civilian expertise. The adoption of the Law on the Military Police and the Law on the Reserve of the Armed Forces created the legal base framework for conducting the reforms. A draft Law on Military Intelligence was elaborated as well.

The "Ministerial Guidance on Defence Policy 2011-2014" document issued in April 2011 focused on the transformation of the Armed Forces and the defence capabilities. The document aims to achieve the stated defence Level of Ambition with respect to the missions and tasks of the Armed Forces.

During the year a reorganization of the operational level command structure encompassing the newly created Joint Forces Command, the Services Commands and the structures directly subordinated to the Minister of Defence was carried out. Transforming the mentioned structures

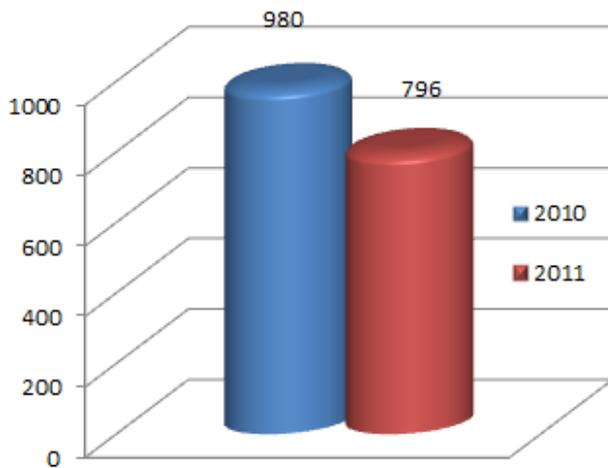

Diagram 1: MoD administration strength

into second-level budget spenders and giving them a legal status of independent juridical actors created better conditions for providing the daily activities of the Armed Forces and for managing real estate property.

A significant decrease in the MoD administrative burden and improvement of the C2 system was also achieved.

(Diagram 1)

In order to increase the efficiency of the defence decision making process, a Risk Management Model in Planning of Defence and the Armed Forces was developed as well.

2.3. MOD TRANSPARENCY AND ACCOUNTABILITY POLICY

2.3.1. EFFECTIVE MANAGEMENT AND ELIMINATION OF CONDITIONS FOR CORRUPTION

The MoD Standing Committee on Anti-Corruption³ concentrated its efforts on preventing the corruption practices by introducing means to increase the defence policy transparency and accountability to the Bulgarian society. In 2011 the Standing Committee adopted a MoD Action Plan aimed at introducing measures for elimination of any conditions for corruption practices throughout the defence establishment levels where defence policy is formulated and implemented. All MoD structures and the structures directly subordinated to the Minister of Defence were tasked to apply the measures set out in the Action Plan.

In compliance with the Action Plan a pilot course on prevention and countering corruption was conducted in “G.S. Rakovski” Defence Staff College. From 2012, the course will become an integral part of the College’s curriculum.

The Standing Committee approved and adopted an “Integrity Pact” document which was signed by the MoD and by all participants in the MoD’s public procurement tenders. By doing so the sides declared that they shall not allow any conflict of interests or cases of abuse of position-in-office.

The MoD Inspectorate developed a “Corruption risk assessment methodology” to be used by the MoD itself, the structures directly subordinated to the Minister of Defence and the Armed Forces. After conducted inspections and checks in accordance to the Methodology, the corruption risk during the period was assessed as “LOW”, the exception being the Military Medical Academy (MMA) where the risk was assessed as “HIGH”. In this view the Minister of Defence approved seven specific measures for prevention of “high risk” corruption and measures on non-admission of violations of the financial discipline.

The MoD continued to issue monthly reports comprising established irregularities, facts and conditions for generation of corruption. These reports were included in the Reports on the “Fulfilment of the Government and Judiciary schedule of urgent measures and activities on the implementation of progress indexes in judiciary reform, the struggle against corruption and organized crime”. No violations with respect to conflict of interest and no cases of corruption were established.

³ Established in September 2009

A policy of transparency and accountability regarding the actions and activities of the MoD leadership was consistently implemented. Full public access was constantly provided with respect to the MoD procurement and tenders procedures. The information on opening public procurement procedures and their implementation was updated on a daily basis. This allowed equal opportunities for all companies willing to participate and introduced transparency throughout the whole process.

In July 2011, the beginning of an active bilateral dialogue between the MoD and different non-governmental organizations (NGOs) was initiated by issuing of Regular Standing Committee on Anti-Corruption Bulletins. These Bulletins informed the general public about the anti-corruption measures taken and the results achieved after their implementation.

The MoD published on its website the “Annual report on the implementation of the established policies and programs in the Ministry of Defence for 2010”, the “Report on the first six months of 2011”, information on the fulfilment of the MoD budget for 2011 and the quarterly “Reports on the activities of the Ministry of Defence”.

2.3.2. INFORMATION POLICY

The MoD information policy was implemented in three dimensions - (1) relations with central and regional media, (2) spreading of internal information and (3) contacts with NGOs, local public and individual citizens. The basic principle of the information policy was to provide timely and objective information about the Bulgarian Armed Forces activities.⁴ All approved, adopted or endorsed strategic documents, concepts, plans, reports and legislative acts were published on the MoD website. Sociological studies conducted in 2011 showed that the Armed Forces preserve their traditional leading place with respect to trust among the institutions in Bulgaria. For merits in the field of providing information, in September 2011 the MoD was awarded a Certificate of Honour for its contribution in the sphere of freedom of information coinciding with the International “Right to Know” day. The awarded prize was for the provided information about the conducted activities at the Central Artillery Technical testing range “Zmeiovo” and was in the category “Institution, which had organized in the best way the provision of information to the citizens”.

2.3.3. CONTROL AND AUDIT ACTIVITIES

In 2011, the MoD Inspectorate conducted a total of 130 inspections. Seventy eight reports on the results of the conducted inspections comprising 128 suggestions on ways to eliminate different system weaknesses and flaws were presented to the Minister of Defence.

During the year 16 signals on MoD or the Commission on Prevention and Counteracting Corruption to the Council of Ministers websites were registered. Additionally four signals were registered by the MoD Inspectorate via telephone. All signals were related to different violations and irregularities concerning abuse of power, incompetent management of state property, irregular activities of individuals and corruption. Nine of the signals were sent to corresponding competence structures for undertaking actions, whilst one was suspended due to lack of relevant and concrete information. The inspection results in two cases were submitted to the Sofia Military District Prosecutor’s Office and one to the Sofia Military Prosecutor’s Office of Appeals. The results of the inspections on two signals concerning conflict of interest turned unfounded.

In 2011, the MoD “Information Security” Directorate conducted seven inspections. The Classified Information Protection System functioned stably and prevented any unauthorized access to classified information.

⁴ More than 650 news reports were published on the MoD website and more than 150 written responses were sent to journalists’ inquiries.

During the period the MoD “Internal Audit” Directorate conducted 31 planned audit commitments, 5 unscheduled audit commitments aimed at bolstering confidence and 16 Minister of Defence assigned consultations commitments. The main conclusions stemming are:

- The Integrity Pact signed by the MoD and the participants in public procurement tenders considerably decreased the corruption risks;
- In order to apply the recommendations set in the report of the Peer Review on the self-assessment of Bulgaria within the framework of the NATO Building Integrity Initiative, precise and measurable activities with concrete deadlines were undertaken;
- Due to delayed procedures on assigning public procurement, several payments were made to expired terms of validity contracts referring to guarding of real estate property. Parallel to this, it was necessary to pay for ineffective guarding of property, with the amount of funds spent on this exceeding the value of the guarded buildings and facilities themselves.

2.4. FINANCIAL RESOURCES

Based on the Law of the State budget of the Republic of Bulgaria for 2011 and Government Decree №334/29.12.2010, the MoD defence budget for planned for 2011 was 1 012 240 thousand BGN, or 1,31% of the GDP.

During the year, the actual MoD budget expenditures amounted to 1 065 987 thousand BGN. The state subsidy, transfers, etc. were 1 035 623 thousand BGN and MoD generated revenues amounted to 30 364 thousand BGN, thus reaching 1,42% of the GDP.

The transfer of funds to the Higher Education State Military Schools under the provisions of function “Education” amounted to 26 186, 7 thousand BGN.

The funds related to financial support of the MoD central administration, distributed within the framework of the basic sector expenditures were:

- Personnel - 23 255 thousand BGN/ incl. indemnities - 2 471 thousand BGN.
- Operations and maintenance - 71 124 thousand BGN.
- Investment - 7 257 thousand BGN.

The MoD spent funds related to international activities and upkeep of the Bulgarian Delegations and Representations abroad amounted to 6 552 thousand BGN. The expenditures for the Armed Forces participation in multinational military formations, coalition operations, NATO, EU and UN-led operations, joint training and international exercises amounted to 55 803 thousand BGN. The expenditures for military infrastructure, primarily for security and taxation were 18 940 thousand BGN.

All expenditures were on the basis of the approved limits and priorities, and were in conformity with the MoD budget for 2011.

Diagram 2 shows the distribution of the expenditures in 2009, 2010 and 2011.

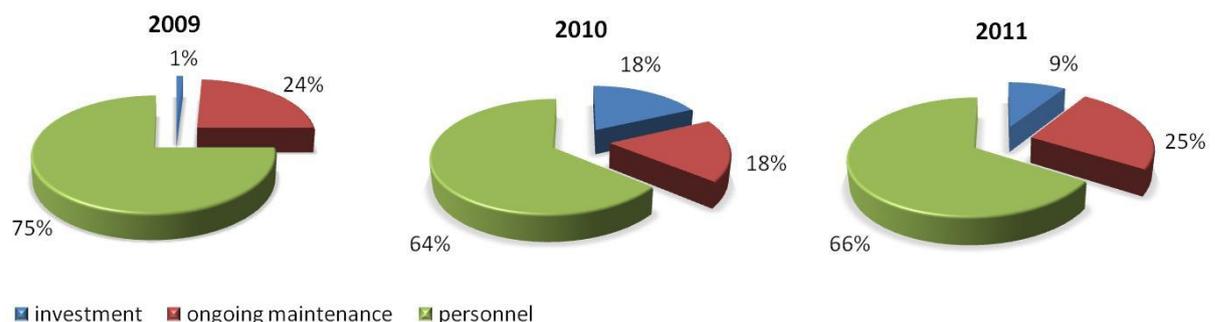

Diagram 2

The diagram shows the changes in expenditures directed towards improvement of the internal distribution of costs and approaching the goal set in the White Paper – balanced budget and distribution ratio 60%:25%:15%. As a result of the reforms, the percentage of the expenditures for personnel in 2010 and 2011 has decreased, compared to 2009. The relative share of operations and maintenance expenditures incl. training has increased, as has increased the relative share of expenditures related to investment. The twofold investment expenditures figure in 2010 (18%) compared to 2011 (9%) was due to the additionally allocated funds for payments to old acquisition contracts.

In accordance with the White Paper adopted by Parliament, the plans and schedules for the development of the Armed Forces were elaborated on the basis of a defence budget of 1.5% of the GDP, estimated to 1 128 980,3 thousand BGN. The 2011 MoD budget amounted to 1,42% of the GDP (incl. funds for the Higher Education state military schools - 29 331,2 thousand BGN). The limited financial resources and the payments to previous obligations limited the build-up of new operational capabilities, influenced the maintenance of the existing ones and resulted upon the full fulfilment of the NATO Force Goals. The situation with the defence budget for 2012 is equivalent. The current year MoD budget amounts to 1 002 240, 4 thousand BGN, or 1,24% of the GDP. This is some 210 000 thousand BGN less than required. This fact necessitates the delay of some of the activities set in the Plan for development of the Armed Forces, delay in the start of key MoD IPP 2020 projects and respectively – delay in the build-up of the necessary operational capabilities of the Armed Forces.

The following activities were not fully funded by the 2011 MoD budget:

- operations and maintenance expenditures – for spare parts, lubricants and fuels necessary to conduct flight training of the Air Force in accordance with NATO Standards, for contract for regular maintenance of armaments and equipment and for contracts for reconstruction and repairs of buildings;
- implementation of the MoD IPP 2020 in its part about the Battalion Battle Group supplying with armaments, instruments and equipment;
- implementation of the “Strategy for introduction of Universal mobile telecommunication systems” and the “Plan for induction of ground digital television broadcasting in the Republic of Bulgaria” - necessary funds to complete the optimized contracts whose execution has already started in order to achieve most effectively the necessary capabilities and to harmonize the frequency spectrum in the Republic of Bulgaria;
- renewal of the L-39, L-410 aircraft and Mi-24 helicopter flights;
- conducting AS-532AL “Cougar” helicopters flight activities;
- further refurbishment and modernization of armaments and equipment under modernization projects (“second hand” ships);
- disposal of excess ammunitions;
- repairs and security of the basic infrastructure;
- funding of the Military Medical Academy under function “Healthcare” in fulfilling its tasks of national importance – the funding has not been fully provided for, which lead to the accumulation of considerable amount of unpaid obligations,

The MoD responded by implementing strict control and pursued efficiency in spending of the financial resources. In 2011, the Program Council to the Minister of Defence examined on a monthly basis all issues related to the distribution of the defence resources with respect to the main programs within the sector policies. Thus the transparent management in the spending of financial resources and the necessary flexibility in the fulfilment of the MoD Unified Financial Plan for

Materiel Provision for 2011 was guaranteed. Constant control was exerted over the payment limits in line with the received documentation for accomplished deliveries and services.

A balanced system of efficiency parameters in the implementation of the defence programs was developed with the aim to apply modern management methods. A continuous analysis and control through the elaboration of periodic reports on the implementation of the MoD policies and programs was conducted during the year.

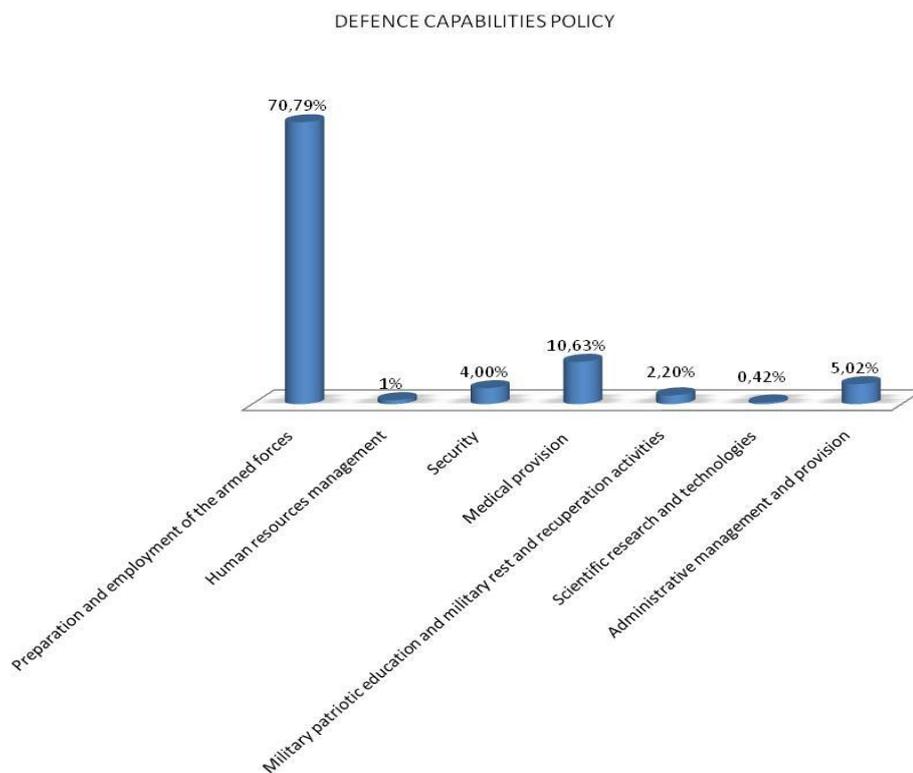

A Defence Programs Risk Management Committee was established in the MoD, the structures directly subordinated to the Minister of Defence and the Bulgarian Armed forces. Its task is to conduct monitoring, reporting and control over the overall risk management process of the defence programs.

A cost evaluation of the whole life cycle of the investment projects from the MoD IPP 2020, and included in the programs was conducted as well.

2.5. POLICY BUDGET PROGRAMS EXECUTION

With the adoption of the White Paper, the National Security Strategy, the National Defence Strategy and the Ministerial Guidance on Defence Policy 2011-2014, for the first time in many years, in 2011 the processes of planning, programming, budgeting and execution were conducted within a completely provided strategic framework, defined national interests, aims, goals and Level of Ambition in defence. In accordance to the Ministerial guidance, since last year the MoD sector policies were decreased from four to two, namely - sector policy "Defence capabilities", and sector policy "Alliance and international security".

2.5.1. SECTOR POLICY "DEFENCE CAPABILITIES"

1.

Diagram 3

The major aim of sector policy "Defence Capabilities" is to build a single set of interoperable Armed Forces, capable of fulfilling the whole range of tasks, under a single C2 system both for peacetime and in times of crises, with adequate organization, size, armaments, equipment and training. This goal is being implemented by fulfilling concrete measures and activities, envisioned to be completed by 2014.

The financial resources spent under this sector policy amounted to 975 079 022 BGN, which is 94,06 % of the total MoD expenditures. These resources were allocated among Main Programs 1, 2, 3, 5, 6, 7 and 9, which support the policy, as exemplified in Diagram 3 and Table

MAIN PROGRAM	SPENT (BGN)	% of the total MoD expenditures
1. Training and employment of the Armed Forces	733 900 566	70,79 %
2. Human resources management	10 334 234	1%
3. Security	41 424 589	4%
5. Medical provision	110 213 972	10,63%
6. Military patriotic education and military rest and recuperation activities	22 802 252	2,2%
7. Scientific research and technologies	4 329 822	0,42 %
9. Administrative management and provision	52 073 587	5,02 %

Table 1

2.5.2. SECTOR POLICY "ALLIED AND INTERNATIONAL SECURITY"

ALLIED AND INTERNATIONAL SECURITY POLICY

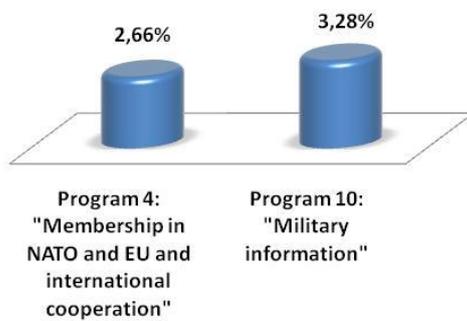

Diagram 4

The major aim of this sector policy is to actively participate in formulating NATO and EU security and defence policies and to adequately contribute to their implementation. This means increasing the effectiveness of consultations and decision-making processes, asserting the Bulgarian interests and positions during the elaboration of Allied decisions and documents, in current and future operations, in defence initiatives and in the processes of transformation and reforms.

The financial resources spent under this sector policy amounted to 61 587 010 BGN or 5,94 % of the MoD expenditures. These resources were allocated among main programs 4 and 10 as exemplified in Diagram 4 and Table 2:

MAIN PROGRAM	SPENT (BGN)	% of the total MoD expenditures
4. Membership in NATO and EU and international cooperation	27 597 342	2,66 %
10. Military information	33 989 668	3,28 %

Table 2

3. ARMED FORCES AND DEFENCE CAPABILITIES

In 2011 the training, exercises, preparation and education process in the Bulgarian Armed Forces was conducted within the limits of the allocated financial resources. It was aimed at keeping and developing the existing as well as acquiring new defence capabilities. The process was in conjunction with the adopted standards and the established scenarios for building up of interoperable HQs and formations, necessary for fulfilling the missions and tasks of the Armed Forces. An emphasis was laid on the acquiring

of special skills, new techniques, tactics and procedures, and achieving and maintaining the capabilities necessary for the fulfilment of the full spectrum of tasks, both in peacetime and in crises. The effective mastering of the planned combat tasks led to an increased professionalism and high personnel skills.

During the year, the Armed Forces planned 201 exercises of which 197 (98%) were conducted.

Table 3 shows the training activities in 2011 compared to 2010:

Training (classes, exercises)	Planned 2010	Conducted 2010 (execution %)	Planned 2011	Conducted 2011 (execution %)
Battalion, artillery battalion, command-staff exercises and computer- assisted command-staff exercises	33	9 (27 %)	40	43 (108 %)
Field training	10	10 (100 %)	14	14 (100 %)
International and joint training exercises	24	21 (88 %)	31	28 (90 %)

Table 3

The analysis of the data shows a considerable increase in the activities related to the combat training both as an absolute value and as a percentage of the initially planned. This tendency is most evident in the cases of battalion level training and exercises.

Diagram 5 shows a comparison of the main training activities in 2010 and 2011.

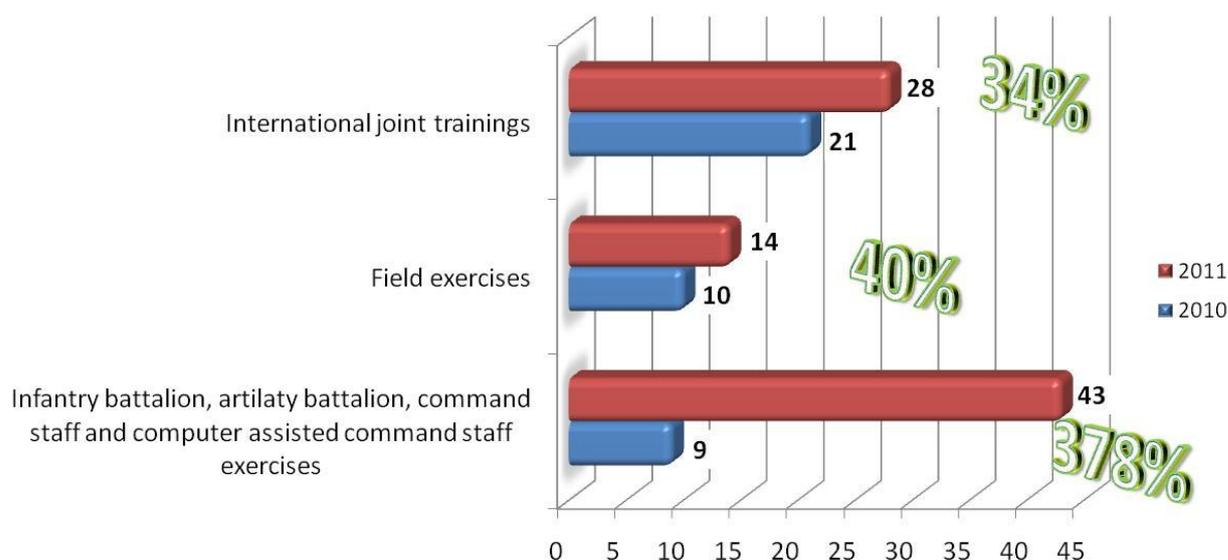

Diagram 5

Due to the restoration to a great degree of the balance between the types of expenditure, the necessary conditions for increasing the allocated resources for combat training were established. The available resources are still insufficient but the focus was shifted again to the true priorities and tasks of the Armed Forces.

3.1. LAND FORCES

The main efforts were directed towards organizing the process of building up of the Land Forces' priority capabilities related primarily to the build-up and training of the Battalion Battle Groups. In 2011 the process of building, manning and training of the Battalion Battle Groups in accordance with the Vision for development of the Land Forces, the White Paper and the NATO Force Goals commenced.

The Land Forces also elaborated projects for re-arming with main types of armament and equipment, projects on exemption of excess armament, equipment and military areas (grounds) and carried out transition towards a new Land Forces organizational structure which took place in some units. Challenges before the Land Forces were the decreased budget and the unchanged volume of tasks. Other challenges were the increased number of units participating in missions and operations, modernization, build up and training of the Battalion Battle Groups, etc.

A Battalion Battle Group Doctrine was elaborated. This Doctrine brings to a common understanding the Battalion Battle Groups' mission, tasks, necessary capabilities, principles of building up, deployment, employment and sustainment and their role in participating effectively in the full spectrum of operations.

compared to 2010:

The Land Forces training, exercises, preparation and education was directed towards improving the interoperability with NATO and EU forces. Five inspections and assessments of the combat capabilities of the declared units were conducted. The certification process of the HQs and the units was conducted implementing NATO ACO standards.

Last year the Land Forces planned 127 exercises total, of which 124 (97%) were conducted.

Table 4 shows the combat training activities in the Land Forces for 2011

Training (classes, exercises)	Planned 2010	Conducted in 2010 (execution %)	Planned 2011	Conducted in 2011 (execution %)
Parachute jumps	4142	3335 (81 %)	4718	4718 (100 %)
Company/battery exercises	84	56 (67 %)	111	108 ⁵⁶ (97 %)
Battalion/artillery battalion, command-staff and computer assisted command-staff exercises	30	8 (27 %)	16	16 (100 %)
Field camps	10	10 (100 %)	14	14 (100 %)

Table 4

Diagram 6 shows the combat training in 2010 and in 2011.

⁵ The exercises company/battery which were not conducted were due to a change of the formation's combat tasks

⁶ By a decision №207/31.03.2011a Strategy

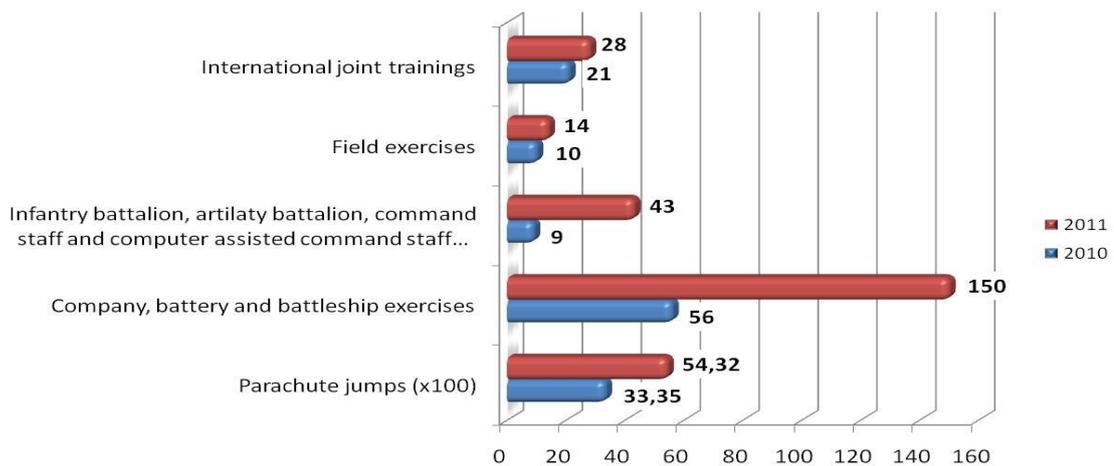

Diagram 6

The Land Forces also participated in 14 international joint training exercises and activities .

3.2. AIR FORCE

In 2011, the Air Force directed its efforts towards (1) conducting a quality educational-training process, aimed at effective fulfilment of the main tasks set in the “Commanders, headquarters and Air Force Troops Training Plan”, (2) fulfilling the Force Goals and (3) modernization under limited resources.

The year can be characterized as being one with strong dynamics in the process of transformation and structural changes. The aim was to achieve new quality in the functioning, the effective management and the interaction with the other services of the Land forces.

Under the conditions of limited resources, the acquired level of training and the available working equipment allowed the Air Force to fulfil their missions and tasks while preserving the bond between the flight crews and the ground personnel. The Air Force Command and the units’ HQs proved to be composite C2 bodies, able to plan and organize the activities by using the available capabilities and resources. Flight activities were conducted under the conditions of “admissible risk”, employing new organization of planning, conducting, control and support of the flights. The Air Force successfully fulfilled the tasks for protecting and assisting the population in cases of natural disasters as well as in resolving crisis situations, both in country and abroad.

Within the available resources the Air Force continued to preserve and further develop the operational capabilities in conformity with the Armed Forces missions and tasks with respect to NATO and in fulfilling generally Bulgaria’s international commitments.

Executing the PDAF, the Air Force continued the process of transformation on operational and tactical level. An emphasis was put on the preliminary work regarding the planned for 2012 reorganization of the tactical units.

The Air Force fulfilled its tasks on protecting and defending Bulgaria’s air space and critical infrastructure.

Ten exercises were planned and successfully conducted (100%). Due to the conducted joint Bulgarian – US training exercises, the planned parachute jumps were over fulfilled.

Training/ classes, exercises	Planned	Conducted	Execution (%)
Squadron, AD battalion, command-staff and computer-assisted command staff exercises	8	8	100 %
Company, battery exercises	2	2	100 %
Parachute jumps	231	301	130 %

Table 5

Air Force personnel participated in 11 international exercises and joint training exercises.

Of the total planned flight hours, the Air Force executed 72%, which as an absolute value, is equal to the total planned flight hours for 2010. Of the planned combat training flight hours the Air Force executed 64%. The non-fulfilment of the planned total annual flight hours was due to spare parts shortage, limited remaining platforms flight resource and delays in fulfilling aviation equipment repairs and refurbishment contracts.

In 2011 “flight safety” was a paramount imperative in the work of the Air Force Command and the Air Force unit commanders. Aircraft aviation incidents were 7% less compared to 2010. The tendency of the past years was preserved: approximately 64% of the aviation incidents were due to failures of aviation equipment. Main reasons for these were the use of aviation equipment at the end of its technical life cycle or in a period of an extended life cycle as well as the process of mastering new materiel resources. The second in number were the incidents due to subjective reasons (incorrect flight crew actions) – comprising 26% of the total number, which as a result of the limited training and available resources mark an increase compared to 2010.

In 2011, the Bulgarian military aviation 100th anniversary, Air Force base “Balchik”’s 70th anniversary, Air Force base “Graf Ignatieviev” and Helicopter Air base “Krumovo”’s 60th and the 50th anniversary of the Air defence missile brigade were commemorated.

3.3. NAVAL FORCES

The Naval Forces conducted training, exercises, preparation and education for participation in the whole spectrum of missions and tasks, for guaranteeing the sovereignty and security of the Republic of Bulgaria and protection of its territorial integrity, protection of the national interests in the maritime space, participation in the NATO collective defence and support to the international peace and security.

The insufficient financial resources allocated for materiel, services, repairs and spare parts hampered the maintenance of the armament and equipment and the Navy’s normal functioning as a whole.

One of the main goals of the Naval Forces during the past year was to achieve and maintain within the available resource framework, the necessary defence capabilities of the NATO and EU declared units. In fulfilling this goal, the NATO and EU declared units were kept in a state of readiness to fulfil their specific tasks. Notwithstanding the financial and resource insufficiency, the coalition and international commitments were fulfilled.

The state of the Naval Forces permits them in cases of natural disasters to provide assistance to the population. The personnel is trained, has appropriate certificates and the platforms and equipment are in good working condition.

The main training efforts were directed towards improving the operational capabilities, increasing the efficacy and interoperability of the Bulgarian naval forces with the Navies of the Allies through implementation of the Armed Forces Force Goals. Necessary efforts were undertaken to carry out the planned tasks and combat exercises. Due to the limited financial resources, priority was given mainly to training of the declared units and their participation in international exercises.

From April through May 2011, a Bulgarian naval forces frigate “Drazki” and a special operations group took part in the NATO operation “Unified Protector” in support of the arms embargo against Libya.

During the year the Naval Forces planned 60 exercises of which 59 were conducted. (Table 6)

Training (classes, exercises)	Planned 2011	Conducted 2011	Execution (%)
Company/battery exercises	44	40	91%
Battalion/artillery battalion, command-staff and computer-assisted command staff exercises	16	19	119%
Parachute jumps	420	413	98%

Table 6

The Naval Forces participated in 9 international and joint training exercises.

During the “Breeze/Certex 2011” exercise, maritime multinational joint operational forces component level staff procedures were trained. Different techniques, tactics and procedures for participation in crisis response operations in an asymmetric threats environment were trained as well. The interoperability and interaction among the other participating NATO member states’ Navies, NATO Standing Maritime Group 2, and the partners from other participating state bodies and institutions was greatly improved. During the exercise, the Bulgarian naval forces frigate “Verni” was certified and was assessed as “Mission ready”.

The preparation for certification in 2012 of the MHV “Tzibar” continued throughout the year. The Bulgarian naval forces frigate “Verni” and the MSV “Priboi” took part respectively in the first and the second activation of the Black Sea Naval Cooperation Task Group “BLACKSEAFOR”.

In 2011 a priority goal for the Navy was to maintain capabilities for maritime surveillance and

early warning in case of emerging crises by gathering information via the Coastal surveillance system for shipping and maritime border control - EKRAN. The mentioned system provides unified maritime situational awareness information which is passed to the Naval Sovereignty Operations Center.

The Naval forces received three AS 565 MB “Panther” helicopters. Pilots, technicians and avionics experts attended training courses at the “Eurocopter” training centre.

Bulgarian Naval Special Forces units took part in the joint Bulgarian-US training exercises “Thracian Spring 2011”, “Thracian Autumn 2011” and in the joint training exercise with units from the US Marine Corps “Black Sea Rotation Forces 11”. A JCATS simulation system computer assisted command–staff exercise “Maritime Coastal Guard 2011” was conducted as well. Four Naval forces divers participated in the international exercise „Eurasian Partnership Dive 2011” which took place in Constanta, Romania.

3.4. EXECUTION OF THE MISSIONS OF THE ARMED FORCES

Mission “Defence” - the combat readiness plans were updated in conformity with the defence system structural and organizational changes. Conditions were established for timely putting the Armed Forces into a higher state alert and combat operational readiness.

Mission “Support to international peace and security” - 15 contingents for participation in NATO and EU operations were trained, certified and employed (Table 7).

Contingent	Certifications
ISAF (International Security Assistance Force) Operation in Kabul, Afghanistan	3
ISAF (International Security Assistance Force) Operation in Kandahar, Afghanistan	2
First, Second, Third and Fourth Operational Mentor and Liaison Teams (OMLTs) for participation in ISAF (International Security Assistance Force) Operation in Afghanistan	2
Senior Advisor Team to the Regional training centre of 205 Corps of the Afghanistan National Army, Regional Military Training Centre - Kandahar, for participation in ISAF (International Security Assistance Force) Operation in Kandahar, Afghanistan	2
EU ALTHEA Operation in Bosnia and Herzegovina	2
Liaison and Observation team (LOT) for EU ALTHEA Operation in Bosnia and Herzegovina	1
NATO KFOR operation in Kosovo	3

Table 7

In fulfilling the Armed Forces Force Goals, the following units and military formations were certified in accordance to Alliance standards: a brigade HQ and five formations from the Land Forces, two fighter aircraft from the Air Force and a frigate from the Navy. In the context of the commitments to NATO and EU, despite the existing difficulties related to insufficient funding, the process of developing the national defence capabilities continued. Necessary Conditions were established for training and certification of the NATO declared forces and fulfilment of the Force goals within the framework of the available resources.

Mission “Contribution to the national security in peacetime” - the Armed Forces possess capabilities for providing assistance to the population, to other government agencies and organisations and to local authorities. In everyday life, the Armed forces participated in forest and field fire extinguishing, snow clearance and patient transportation activities in winter, unexploded ammunitions clearance and disposal, air medical evacuation, transplantation transportation activities, etc.

3.5. PARTICIPATION IN MISSIONS AND OPERATIONS

Towards the end of 2011, the total size of the Armed Forces contingents participating in total of eight NATO, EU and UN led missions and operations exceeded 760 personnel. The total number of personnel deployed in operations in 2011 was 1739.

3.5.1. NATO MISSIONS AND OPERATIONS

- **ISAF (International Security Assistance Force in Afghanistan);**

A contingent of approximately 620 personnel was deployed in the NATO led International Security Assistance Force in Afghanistan. The contingent included: national element, staff officers, force protection company in Kandahar, infantry company at Kabul International Airport, Military Police unit, medical teams in Herat, Kandahar and Kabul, a reconnaissance team, a Senior Advisor Team to the Regional Training Centre in Kandahar and four Operational Mentor and Liaison Teams (OMLTs) in Kabul and Kandahar. The Government adopted ⁷ a Strategy for “Transformation of the participation of the Armed Forces of the Republic of Bulgaria in the International Security Assistance Force in Afghanistan”.

- **NATO Training Mission in Iraq (NTM-I);**

Two officers took part in the training mission. In the middle of December 2011, the mission was terminated. NATO’s further cooperation with the Iraqi government is conducted in accordance with the established Structuralized Cooperation Framework.

- **KFOR Operation (Kosovo Force Operation);**

The events in Northern Kosovo influenced the process of transition to the next intermediate stage of the operation. The main tasks of KFOR were: improvement of security, riot control, build-up of the Kosovo Security Forces, protection and hand-over of special status sites, border surveillance and air traffic control. Ten servicemen participated in the operation, stationed at the KFOR HQ and at the NATO Training Group in Kosovo.

- **Operation Ocean Shield (NATO maritime counter piracy operation off the coast of Somalia - OOS);**

One serviceman participated for four months on board the Standing NATO Maritime Group 2 flagship HQ.

- **NATO Unified Protector Operation (protection of civilians and civil population zones in Libya from threats of armed attacks and in support of the arms embargo against Libya.**

The three aspects of the operation Unified Protector – arms embargo, no-fly zone, and humanitarian mission were successfully fulfilled in accordance with the UNSC Resolutions. Bulgaria participated in the operation in the course of one month with the Naval Forces frigate “Drazki” and a Naval Special Operations Group. After the return of the ship –Bulgaria’s participation continued with staff officers stationed at the headquarters of the operation.

- **NATO Response Force (NRF) in 2011.**

During the period 1st January until 30th June 2011 (NRF-16) one Special Operations Forces Tactical group and a Military Police platoon were on stand-by, A Civil-Military Cooperation Group was on stand-by during the period 1st July till 31st December 2011 (NRF-17).

3.5.2. EU MISSIONS AND OPERATIONS

- **European Union Naval Force Somalia - Operation ATALANTA** aimed at countering, prevention and deterring piracy off the coasts of Somalia.

⁷ Government decision № 866/01.12.2011

Bulgaria participated with one officer in the Operational HQ of the first EU naval operation “ATALANTA”, which guaranteed maritime security and protection of vessels delivering food under the World Food Program (WFP).

- **EU Military Operation in Bosnia and Herzegovina ALTHEA (EUFOR, EU Force ALTHEA).**

Operation “ALTHEA” continues to be an important part of the EU commitments in Bosnia and Herzegovina. In view of the developments of the operation and the changes in the format of the other countries’ participation, Bulgaria changed its level of participation and at the end of August 2011 withdrew the Liaison and Surveillance Group from Bugoino. The Armed Forces participate in the operation with: a national element, a light infantry company in “Butmir” base, a national intelligence cell and personnel stationed at the HQ in Sarajevo. The total number of personnel was 109. In October 2011, the EU Council made a decision concerning the mandate of operation ALTHEA which may lead to reformulation of the future Bulgarian participation.

- **EU Monitoring Mission (EUMM) in Georgia.**

12 military observers participate in the mission stationed in three field offices.

- **EUPOL, EU Police Mission in Afghanistan.**

One serviceman who performs instructor’s functions participated in the mission

- **Contribution to the EU multinational battle group „HELBROC”**

One mechanized company from the Bulgarian armed forces was on stand-by for the period from 1st July till 31st December 2011.

3.5.3. UN MISSIONS AND OPERATIONS

- **UN Mission in Liberia (UNMIL)**

Two military observers participated in UN Mission in Liberia (UNMIL).

3.5.4. OPERATIONS AND MISSIONS IN SUPPORT OF THE POPULATION

The Bulgarian Armed Forces have **96 module units at their disposal** tasked to cope with/or to overcome the consequences of natural ecological disasters and industrial accidents and catastrophes (Table 8)

Units tasked to cope with/or to overcome the consequences	JFC	Land Forces	Air Force	Naval Forces	NMU	Total
For the elimination of consequences in case of an accident at the Nuclear Power Plant “Kozloduy”	-	5	1	-	-	6
For activities in cases of industrial accidents	-	5	2	-	-	7
For extinguishing fires		14	3	3		20
For activities in cases of floods	1	12	-	1	-	14
For activities in cases of an earthquake	1	3	3	2	-	9
For activities under harsh conditions in winter	2	14	6	2	-	24
For intelligence and EOD activities	-	11	2	2	1	16

Table 8

The units are geographically based into three zones and seven areas on the whole territory of the country. The territorial principle of basing does not exclude the possibility for deployment in

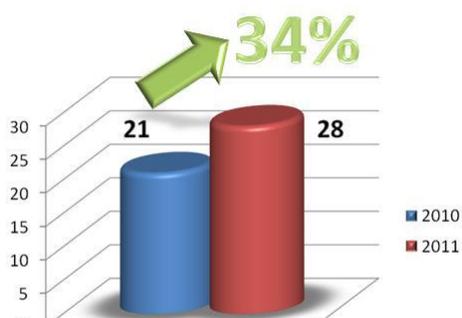

other regions if necessary, which will be done in compliance with the operational plans to be developed for each concrete situation.

With respect to mission “Contribution to the national security in peacetime”, at the beginning of July 2011, a joint international operation “Hot Summer 2011” aimed at carrying out deep sub-surface clearance of unexploded ordnance (UXO) commenced in the area around the village of Chelopechene. Personnel from the Armed Forces, the Military Medical Academy, the Military police (57 servicemen altogether) and representatives of the International Trust Fund for De-mining and Mine Victims Assistance (teams from a US company - total of 37 Bulgarian and US experts) were involved in the mission. The operational management and organization of the interaction was carried out by the Joint Forces Command.

Since November 2011, the Joint Forces Command has also exerted operational control over the activities related to the elimination of the consequences of the accident that occurred at a private company ammunitions warehouse in the vicinity of the village of Lovni Dol, Sevlievo municipality, with the participation of specialists from military unit № 28880 – Belene.

In 2011 the Bulgarian Armed Forces participated with 628 servicemen and 300 pieces of equipment altogether in different activities on providing assistance for the population, the state structures and public organizations. The total expenditures for these activities amounted to 46 165 BGN.

3.6. JOINT TRAINING

Joint international and interagency exercises
Diagram 8

The emphasis was placed on international and interagency joint training to check the readiness for implementation of the comprehensive approach to planning and conduct of operations, thus putting the participants in a close to real situation.

The participation of Armed Forces units in large scale joint international and interagency exercises in 2011 was increased by 34% in comparison with 2010 (Diagram 8).

In the course of implementation of the Agreement between the Government of the Republic of Bulgaria and the Government of the United States of America on Defence Cooperation and the 2011 Joint Bulgaria-US Training Plan, 15

Bulgarian-US training exercises were conducted on the territory of Bulgaria – eight joint training exercises, three Land Forces Special Forces training exercises, one Military Police training exercise and three NAVY ship visits in which about 2400 personnel took part.

In 2011, approximately 3000 military personnel took part in trainings and exercises with US Forces both in Bulgaria and abroad. Ministry of Interior units took part in two training exercises.

Major repair works to the total amount of \$ 943 040 were carried out in 11 settlements of 6 districts (Sliven, Yambol, Burgas, Plovdiv, Kyustendil and Montana).

During the period June 12th – July 12th 2011, the joint Bulgarian-US training exercise “Black Sea Rotation Force-11” took place around Novo Selo Training Area, Krumovo and Bezmer Air Bases and “Vasil Levski” National Military University. Bulgaria participated with about

700 personnel. US Marine Corps units stationed in Europe and an Army unit of the Republic of Serbia also took part in the mentioned exercise.

During the period August 27 - September 10 2011, a military unit took part in a training exercise with US Marine corps units and Ukraine Army units which took place in the Yavoriv International Peacekeeping Training Centre in Ukraine.

Three Partnership Development Program training exercises with the participation of US SOCEUR (Special Operations Command Europe) Special Operations Forces (SOF) units and the Bulgarian Land Forces Psychological Operations (PSYOP) unit were held in the vicinities of Sofia, Plovdiv and "Tsruncha" Specialized Training Centre. Bulgaria participated with about 300 personnel.

The annual SOF exercise "JACKAL STONE 11" was conducted during the period from 6th September till 30th September 2011. For the first time Bulgaria has been one of the exercise host countries. Besides exercises on Bulgarian territory, SOF actions were worked off in parallel in Romania and Ukraine. Over 1500 SOF personnel from 9 countries⁷ took part in the exercise. Bulgaria was represented with about 200 personnel.

During the period 25th April till 7th May 2011, Plovdiv hosted the bilateral Bulgarian - US training exercise "Thracian Spring 2011". The US participated with four C-130 "Hercules" transport aircraft and 150 personnel, while the Bulgarian participation featured 600 personnel, C-27J "Spartan" transport aircraft and AS-532AL "Cougar" helicopters. The period 10th October – 21 October 2011 marked the joint BUL- US training exercise "Thracian Fall 2011" in which Bulgaria participated with 400 personnel and a Ministry of Interior unit. The exercises contributed to the enhancement of the operational capabilities of the declared units and the improvement of interoperability.

Five rotation training exercises of contingents designated for participation in missions and operations abroad were conducted at the US "Hohenfels" and "Grafenwoehr" Joint Multinational Training Centres (Germany) with the participation of units from the Land forces totalling 450 personnel and twelve courses for the detection and subsequent destruction/disablement of Improvised Explosive Devices were also conducted.

The conducted joint training and exercises with units from the US and other countries' Armed Forces have improved the capacity for work in a multinational environment and have contributed to the improvement of the Armed Forces units' training and field craft.

3.7. DEVELOPMENT OF NATIONAL DEFENCE AND THE ARMED FORCES CONCEPTUAL AND DOCTRINAL DOCUMENTS

At strategic and operational level a system and a working process for development of national conceptual and doctrinal documents in the sphere of defence and the Armed Forces has been established. A Standing Working Group for management and periodical reporting on the elaboration, amendments and supplements to the national conceptual documents in the area of defence and the Armed Forces was also created. A "Plan for the elaboration, amendments and supplements to national conceptual and doctrinal documents in the sphere of Defence and the Armed Forces" was elaborated as well. During the year, the following documents were developed and adopted:

- **National Defence Strategy**⁸;
- **Guidelines for the development of national conceptual and doctrinal documents in the sphere of defence and the Armed Forces;**
- **Doctrine of the Armed Forces of the Republic of Bulgaria** – the basis for development of other core and supporting doctrines;

⁷Bulgaria, Lithuania, Norway, Poland, Romania, the USA, Ukraine, Hungary and Croatia

⁸ Adopted with Council of Ministers Decision № 239 dated 14.04.2011

- **Capabilities Based Defence Planning Guidance** – contributes to the optimization of the planning process and ties planning to NATO and EU planning processes;
- **Operations Planning Guidance** synchronizes national operations planning documents with those of NATO and the EU.

3.8. ARMAMENT AND EQUIPMENT

3.8.1. POLICIES AND APPROACHES TO ARMAMENTS AND EQUIPMENT

A key priority for the Ministry of Defence was the timely sustainment of the Bulgarian contingents deployed in missions and operations abroad.

The M1117 “Guardian” Armored Security Vehicles (ASVs) continue to perform their tasks in Afghanistan and Bulgaria. Through the US Foreign Military Financing (FMF) Programme a procedure was launched for signing a three-year maintenance contract through which Integrated Logistic Support will be provided for a period of 36-month .

The contingent in Afghanistan was equipped with modern vision devices which improves safety in the operation zone.

For the implementing the decision for the participation of the Naval forces frigate “Drazki” in the NATO led operation “Unified Protector”, the MoD signed contracts for service and repair which were performed to the fullest in a very short period of time.

A 4-year Framework Agreement was signed for the provision of MiG-29 aircraft airworthiness which envisages repairs to be performed by Bulgarian enterprises possessing the necessary technological capacities.

The Ministry of Defence signed a 10-year Framework Agreement and the first contract for Integrated Logistic Support of the Bulgarian Air Force C-27J “Spartan” aircraft. The contract signed is for 5 years and includes repairs on the damaged aircraft, delivery of spare parts and consumables, logistics support, training of flight crews and technical personnel.

Three AS565 MB “Panther” helicopters were delivered to the Naval Forces with the flight crews’ basic training completed. Spare parts for the helicopters and the engines were delivered as well

The third contract for procurement of “Mercedes-Benz” military wheeled vehicles was

completed. Pursuant to the Amendment to the Contract and the Contract itself, 137 vehicles were delivered to the Armed Forces, including off-road ground transportation vehicles (armoured and non-armoured), general utility trucks, buses, minibuses and specialized vehicles. The disposal of the exploitation equipment and technologies, software and hardware for technical service and repair of the vehicles contributed to cost reduction of the maintenance of the vehicles.

In 2011 a challenge was the implementation of the Armed Forces modernization projects due to the financial crisis and defence budget which was below 1,5% of GDP.

There were obstacles concerning the timely goods and services public procurement award procedures. Despite this fact, the number of procedures launched and signed contracts have increased. Of all 151 goods and services public procurement award procedures, 132 contracts were signed including 16 Framework Agreements, while 21 procedures were cancelled. In comparison, in 2010, 12 of the conducted 68 procedures were cancelled.

The commitment to public access and openness of public procurement procedures to support competitiveness and prevention of corruptive practices remains an important priority of the MoD. All procedures were publicly released, including the special-purpose public procurements. Information on all procurements was published on the MoD website. In 2010 and 2011 over 70% of the procedures were open public procurements while in 2008 and 2009 - about 50%.

3.8.2. MINISTRY OF DEFENCE INVESTMENT PLAN-PROGRAMME - 2020

The main goal of the MoD Investment Plan-Programme 2020 (Mod IPP 2020) is to provide and acquire the capabilities set out in the Armed Forces Development Plan. The Mod IPP 2020 formulates a unified integrated framework of capital expenditure involving acquisition, integrated logistic support, disposal of and/or modernization of armaments, materiel, equipment and defence infrastructure through implementation of investment and infrastructure projects. The Plan contributes to the achievement of balance between the Armed Forces capabilities needs and the available resources.

To reduce the misbalance between the declared needs of the Armed Forces and projected resources for their provision, prioritization of the projects in accordance with the defined capabilities in the Plan for the Development of the Armed Forces was conducted in 2011. Following this, three main lists of investment projects were elaborated.

- List of priority Investment Projects (13 projects amounting to 2 billion BGN);
- List of Investment Projects with already concluded contracts (29 projects amounting 0.471 billion BGN);
- Indicative list of other Investment Projects (40 projects) which could be implemented in the future.

The Priority Investment projects are aimed at providing support to the main defence capabilities of the Armed Forces and lay the foundation for their development in a way reflecting the current realities.

The main studies and analyses for Investment project “Acquisition of a new base fighter and supply of integrated logistics support” were conducted in 2011. A project team was established. In January 2011, Letters of Inquiry for information for the acquisition of new or second hand multirole fighters were sent to manufacturing countries and the received responses had been analysed.

3.8.3. DEVELOPMENT OF CAPABILITIES IN COOPERATION WITH ALLIES AND PARTNERS

• STRATEGIC AIRLIFT CAPABILITIES PROGRAMME

The participation in and use of NATO Strategic Airlift Capability, (SAC) C-17 Program continued in 2011. The Bulgarian expeditionary contingents’ airlift was organized and carried out mainly using SAC C-17 Programme and US Central Command provided airlift transportation. In 2011, the full quota of flight hours pursuant to SAC C-17 for our country was used. 1383 personnel and 264 tons of material were transported throughout the year. Training of personnel for performing C-17 loading and unloading activities along with passengers and cargo processing at local air bases was also conducted. C-17 loading devices were delivered via US FMF Programme financing.

The effective use of the due flight resources proved the financial effectiveness of the SAC C-17 Programme. As a result of the reduced rotation time of the Bulgarian contingents abroad a considerable financial resources savings were achieved.

• NATO’S GROUND SURVEILLANCE PROGRAMME (AGS)

NATO’s Ground Surveillance Programme (Alliance Ground Surveillance – AGS) is designed for the acquisition of international capability with Bulgarian participation to provide surveillance in NATO led operation area. The acquisition of such type of capability will dramatically improve the information giving a comprehensive picture of the situation on the ground where during

contingents' involvement in NATO operation and will considerably reduce the risk for the personnel participating in them. The Program further envisages participation of the Bulgarian industry proportionate to the financial commitment of our country.

- **NATO SECURITY INVESTMENT PROGRAMME (NSIP) FUNDED PROJECTS**

NATO Security Investment Programme (NSIP) is an initiative to which Bulgaria has been an active partner and since becoming an Alliance full-fledged member. This Programme invests into NATO collective needs in order to achieve the necessary operational capabilities and to create the needed environment for Allied Commands to fulfil any tasks standing before them.

The MoD uses the resources provided through this Programme to invest in building and modernization of the existing national air Bases and naval ports infrastructure, to modernize of the Armed Forces' communication and information systems and for logistics needs. The projects from this Programme contribute to the achievement of new and upgrade of the existing Armed Forces defence capabilities. In 2011, the implementation of two projects through the Programme was finalized whilst procedures and coordination activities on the launching of another two projects were launched.

- **US FOREIGN MILITARY FINANCING (FMF) PROGRAMME PROJECTS**

In 2011, using US Foreign Military Financing (FMF) Programme, priority was given to implementing subproject "Provision of Battalion Battle Group with Material Resources for Logistic Support", which is part of the MoD IPP - 2020 Project 1 - "Build-up of a Battalion Battle Group within a mechanized brigade".

Another project that focused substantial efforts was Project 10 - "Further build-up of the Special Operations Forces" aimed at modernizing the SOF communication and information system and refurbishment with accoutrements, gear, parachutes and air-drop equipment.

During the year the priority for the Navy "EKARAN" - Coastal surveillance system for shipping and maritime border control" project was accomplished the major part of which had been financed by the FMF. The EKARAN system can be technically connected with similar navigation control systems of other national institutions within the National security unified system and with other similar systems within NATO. The implementation process was executed by separating the Project into three sub-projects. Two of them were financed by FMF Programme and have been finalized. Approximately 10 million USD had been invested for their implementation.

In 2011 the work on the preparation for implementation of Phase 3 of the Armed Forces "Logistics information system" Pilot project, directed starting the exploitation of the system also commenced. The main efforts were focused on accrediting the system for processing, transfer and storage of data. The building of the necessary infrastructure was launched in order to open user working stations in ten new formations of the Armed Forces.

- **EUROPEAN AIR TRANSPORT FLEET PROGRAMME (EATF)**

Bulgaria joined the European Air Transport Fleet Programme Agreement in May, 2011.⁹ Under the leadership of the European Defence Agency the elaboration of a Programme Management Plan (PMP) is under way along with a Roadmap for its implementation.

3.8.4. DISPOSAL OF EXCESS AMMUNITIONS

A "Plan-schedule for Excess Ammunition Disposal Activities in 2011" had been endorsed. Based on a Minister of Defence decision, a procedure was launched for the disposal/demolition of ammunitions. The MoD signed contracts with two companies to perform these activities.

⁹By order №324/19.05.2011 of the Council of Ministers

By decision of the expanded session of the Programme Council to the Minister of Defence, a “Disposal and/or demolition of expired Exocet MM 38 anti-ship missiles” position was opened in the MoD Unified Plan for Material and Technical Supplies. Forthcoming is a public procurement award procedure.

3.8.5. OFFSET PRACTICE POLICY

With the conclusion of an additional agreement to Contract UD 03-3/28.01.2005 for the acquisition of AS 532 AL “Cougar” and AS 565 ML “Panther” helicopters, the terms and volume of the Offset compensations had been renegotiated. Under this agreement the necessary helicopter infrastructure, incl. hangars will be built.

3.9. TECHNOLOGY, RESEARCH & DEVELOPMENT PROJECTS

The Defence Institute is the main technological, research and development centre within the defence system. In 2011, high priority was placed on activities related to the implementation of the Armed Forces Force Goals. Efforts were concentrated on three projects:

- Non-lethal capabilities and weapons;
- Improvement of combat armoured vehicles capabilities, and
- Defence capabilities against High-Energy weapons.

In 2011 the Defence Institute Financial resource framework was 2 602 697 BGN, of which the budgetary subsidies were 2 401 147 BGN and generated own revenues - 201 451 BGN.

Scientific, research, applied, testing, experiment and design work, support and studies on 246 different themes and working projects were performed in 2011. Technical specifications, tactical and technical assignments, analyses, opinions, methodology and programs for range and army testing of 570 different defence products were conducted. Quality assurance activities on 100 defence products were conducted. For over 50 armaments, equipment and property, laboratory specialized and acceptance tests were conducted throughout the year.

The Defence Institute significantly contributes to the effective transition from scientific research and development to manufacturing, acquisition and operation of defence products, to their whole life cycle quality assurance in accordance with national and international standards.

4. PEOPLE IN DEFENCE

Human Resources management policy was in unison with the Defence System transformation processes and the goals and priorities set in the White paper on Defence and the Armed Forces.

Considerable attention was paid to the status of military conduct and discipline. The 2011 analysis reveals that military conduct and discipline performance meets the requirements of the different laws, Armed Forces rules and regulations and the Standard Operating Procedures.

In the course of the daily military routine, the efforts of the Armed Forces HQs and different level commanders were focused on activities aimed at prevention of incidents and improvement of the discipline. As a result, compared to 2010, the incidents within the Armed Forces have been reduced by 20%.

Among the registered incidents in the course of performance of professional duties those referring to physical injuries, penetration in guarded facilities and accidents with military equipment predominate. Incidents occurring during non-working hours also drew quite a lot of public attention, but it should be taken under consideration that these incidents occurred out of direct commanders' control. Such incidents refer primarily to traffic accidents with privately owned vehicles and to different injuries due to recklessness. The prevailing cases of military equipment

misappropriation were caused by civilians out of military premises perimeters such as training ranges and firing areas which are not permanently safeguarded.

Missions and operations related incidents in 2011 have decreased by 45% in comparison with 2010. Their character remained relatively unchanged and was related mainly to loss or damage of military property, traffic accidents and physical injuries. The reduction in the number of incidents was due to the improved work of the commanders, the good preliminary and immediate training and preparation of the personnel for participation in operations as well as to the accumulated experience from previous missions and operations.

4.1. STATUS OF THE MINISTRY OF DEFENCE AND THE ARMED FORCES MANNING

As of 31 December 2011, the manning of the MoD, the structures directly subordinated to the Minister of Defence and the Armed Forces was 89,08% of the permanent full-time positions (87,24% for the military and 95,84% for the civilian personnel).

The breakdown by structures was:

- Ministry of Defence - 95,6%, (96,21% for the military and 95,2% for the civilian personnel);
- Structures directly subordinated to the Minister of Defence - 89,52% (83,3% for the military and 94,96% for the civilian personnel);
- Bulgarian Armed Forces - 88,77% (87,83% for the military and 97,56% for the civilian personnel).

The current manning of the Armed Forces allows the fulfilment of the assigned tasks and missions.

In view of the Armed Forces ongoing reform, the necessity to establish a new operationally ready Reserve force, with new organization, flexible manning and modern rules and regulations emerged. The Law on the Reserve of the Armed Forces of the Republic of Bulgaria will contribute to the establishment and sustainment of a usable, armed and capable Reserve force, with agile organization and at a lower cost. On July 1, 2011 a Centralized Military District Authority was established as a separate unit directly subordinated to the Minister of Defence and as a second-level budget spender. The aim is to exert centralized control over the resources of the Reserve. Currently work for elaboration of Draft Rules for Implementation of the Law on Reserve and two other documents – “Ordinance on military register” and a “Mobilization Ordinance” is under way.

Throughout the year and with assistance from the US FMF Programme work continued on developing the Project “Human Resources Management Automated System”. New system modules on “Reserve Resources Accountability”, “Candidates” and “Labour Safety Regulations” were developed as well.

4.2. NATO, EU AND OTHER INTERNATIONAL ORGANIZATIONS HEADQUARTERS POSITIONS

The effective manning of positions within headquarters and steering bodies of different organizations and of the Bulgarian Representations to them contribute to the adequate participation of Bulgaria in the elaboration of the defence and security policies of NATO, EU and the other organizations to which it is a member. Following the conducted competitions held in 2011, total of 34 international positions were seconded by military and civilian personnel. The slow-down in rotating the Bulgarian seconded personnel in 2010 had been fully overcome by the end of 2011. The percentage of manning of the NATO command structure positions by Bulgaria is relative to that of the other member states. Of the total of 118 international positions, 101 have been manned which counts for 85%.

In 2011, for the first time the position of Deputy Director “Cooperation and Regional Security” Division of NATO International Military Staff was taken by a high ranking Bulgarian officer. For the first time a Bulgarian expert was seconded to the European Defence Agency.

4.3. RECRUITMENT AND CAREER DEVELOPMENT

In 2011, the total of 1507 military personnel was discharged from active duty, of which 1095 were by own request. From those discharged from active duty and entitled to pension were 816 military personnel, of which 185 due to age limit; entitled to pension pursuant to Article 69 of the Social Insurance Code and by their own request - 616, and 15 were released by the Minister of Defence or by an authorized person after submission of a 6-month notification.

The vacancies for military positions in the course of 2011 were filled after decisions taken by the MoD Career Development Committees. All candidates applied through the periodically published by the MoD Vacant Positions Registers. This procedure ensured transparency and objectivity during the appointment process.

All alumni of "G.S.Rakovski" National Defence Academy, "V.Levski" National Military University and "N.Vaptsarov" Naval Academy along with the cadets of the Sergeant College were appointed to positions in the Armed Forces and in the structures subordinated to the Minister of Defence.

There was weak interest towards the announced competitions for doctors and nurses' positions at the Military Medical Academy. Additional competitions were required in order to man soldiers' positions in some units.

All military personnel underwent employment attestations¹⁰ pursuant to the elaborated Attestation and Testing System according to which the set of competences should fully cover the requirements for the personal and professional profiles to perform duties and differentiates these requirements in accordance with the different hierarchical levels. Software "surveillance" was developed to monitor unfair performance within the "Employees Appraisal" sub-system of the Human Resources Management Automated System.

During the past year, the system for selection and approval of candidates for work in the Military Information Service was improved. The procedures guaranteeing transparency in the selection of personnel for out of country education and participation in missions and operations were also optimized.

4.4. MILITARY EDUCATIONAL SYSTEM

Basic normative documents required for the implementation of the tasks set in the Plan for the Development of the Armed Forces of the Republic of Bulgaria in the sphere of military education were developed in 2011:

- Regulations on the State Requirements for recognition of the Higher Education in "Military Sciences" profession as a basis for new curricula and qualification characteristics for cadets and trainees.
- Regulations on the terms and conditions for the admission of trainees in Higher Military Schools which gave the military personnel – privates, sergeants, warrant officers and officer candidates the opportunity to acquire higher education at Bachelor and Professional Bachelor educational and qualification degree in Military Studies profession and to acquire junior military officer ranks;
- Amendment and supplement to the Regulation on the Conditions and Order for Admission of Students in the "G.S. Rakovski" National Defence Academy in order to stipulate a new method of academic year organization;

¹⁰ „Regulation for establishing the criteria, means and ways for attestation of the military personnel of the MoD, the structures directly subordinated to the Minister of defence and the Bulgarian Armed Forces" printed in State Gazette, №92/23.11..2010, amended in State Gazette№ 90/ 15.11.2011r.

- Sub-legislative normative act ensuing from the Law on the development of the academic staff in the Republic of Bulgaria on the award of scientific degrees in military academies and higher military schools;

A Report-Analysis was elaborated to plan the measures for admitting cadets in the higher military schools until 2014.

Table 9 shows the number of trainees for 2011-2012 academic years

Military educational institution	Cadets	Trainees	Students	Ph.D. Students	Total
G.S. Rakovski National Defence Academy	-	278	441	63	782
Vasil Levski National Military University	445	-	1923	24	2392
N.Y. Vaptsarov Naval Academy	110	-	2019	23	2152
Professional Master-Sergeant College	Cadets - 34				
Professional Sergeant College	Cadets- 144				

Table 9

In 2011, a total of 2256 post-graduates were educated in qualification courses, of which 1899 job-orientated and further qualified in military educational institutions and 357 in English Language courses. 121 military and civilian personnel attended out of country education courses, seminars and workshop trainings.

During the period from June till September 2011, three new further qualification pilot courses were conducted in the "G.S. Rakovski" National Defence Academy - "Adaptation Consultants", "Anti-corruption" and "Public Procurements organization and awarding". Upon a request by the Joint Forces Command reflecting the needs of the Bulgarian Armed Forces, pilot course "Provision and training of logistic instructors' for OMLT" were conducted in November and December 2011.

4.5. SOCIAL STATUS AND MOTIVATION

The main efforts of the MoD social policy were aimed at preserving the social status and motivation enhancement of the military and civilian personnel and towards the improvement of the normative regulations for social policy and cooperation.

Based on analysis of the state and implementation of the activities providing healthy and safe working conditions, labour accidents and occupational diseases, the normative base was improved. Projects on the improvement of the working conditions were conducted in 17 units. Safety and health measures absorbed 353 605 BGN, which is 53 000 BGN more compared to 2010.

In 2011 the Regulations on the conditions and order for the provision of material assistance at the MoD, the structures subordinated to the Minister of Defence and the Armed Forces was adopted. Thus the number of people entitled to material assistance was enlarged, including war veterans. In 2011 during 12 sessions of the Material Assistance Committee 1306 application for material assistance allotment were considered, of which 1215 were satisfied. The total amount of assistance reached 408 380 BGN.

"One-time" assistance to meet the expenses in cases of disease, death and accidents were granted to 817 military disabled persons to the amount of 203 880 BGN, 19 retired servicemen received 8630 BGN, 38 military personnel received 31 110 BGN, 39 civilian personnel were supported with the total of 34 540 BGN, 20 war veterans – with 2 650 BGN and 117 servicemen injured while fulfilling their duties were given "one-off" sums totalling 73 230 BGN.

The efforts in the area of social adaptation were directed at providing support to discharged servicemen on their transition and adaptation to civilian life. 727 group and individual counselling and discussions took place. In order to support the discharged from military service, in May 2011 a Cooperation agreement was signed between the MoD and the National Employment Agency under the Minister of Labour and Social Policy and with a document called “Joint Guidelines” aimed at easing the implementation of this Agreement. 184 meetings with employers’ job fairs were organized for 250 discharged military persons. The new job seekers were provided with information on 1264 vacant positions. 13 officers from the structures subordinated to the Minister of Defence and the Bulgarian Armed Forces were trained as “adaptation coordinators” and 25 employees were trained as “adaptation consultants” to the Central Military District Command.

Regarding the MoD housing policy, after 01 August 2011, 973 different types of property of which 383 public-private owned and 273 public owned by state were transferred to the Central Military District Command for management. Regulatory activities were performed for 29 properties. The housing fund was also transferred to the Central Military District Command. 7307 employees were indexed for housing of which 1857 were accommodated.

The number of functioning kindergartens under the management of the MoD was 7 in which military and civilian personnel children were taken care of.

4.6. SOCIAL COOPERATION POLICY

During the year, in the framework of the social dialogue, five regular sessions between the MoD leadership and the leadership of the officially represented Trade Unions and one special session of the Specialized Branch Council of Social Cooperation were carried out. The discussions were focused on the status of the social dialogue, the income policy, the provision of safe and healthy labour conditions, additional month remunerations for work in harmful or specific working conditions, on staff and structural changes and following civilian personnel layoffs, the status and perspectives of the higher military schools and on provision of health and safety funds.

Active work continued on the improvement of the interaction between the MoD and public organizations working in the area of defence. A new stage of cooperation was the unification into a Public Council on Defence Issues of 19 NGOs working on different defence issues which promoted the interface among them.

5. INTERNATIONAL AND EURO-ATLANTIC SECURITY, INTERNATIONAL PEACE AND STABILITY

The efforts of the MoD regarding the implementation of the defence policy in the context of the NATO membership were focused on the provision of relevant contribution to the fulfilment of the ambitious agenda of NATO Lisbon Summit.

A key point at the EU agenda continues to be the defence capabilities development through the “pooling and sharing” initiative¹¹.

5.1. THE EUROPEAN UNION – COMMON SECURITY AND DEFENCE POLICY

The efforts of the EU and its member states were directed towards increase and enhancement of the operational capacity in order to tackle with the contemporary security challenges. In a situation of serious defence budgets pressure, the member states reinforced their commitment to build up adequate to the EU Level of ambition capabilities for effective and independent actions in crisis management.

An important direction of the MoD activities was the determination of the national contribution parameters to the “pooling and sharing” initiative and respectively to develop the industrial and technological defence basis at national and European level. As a result of the national

¹¹ Pooling and Sharing – EU initiative for pooling of capabilities and sharing defence costs.

defence capabilities analyses were specified those bearing the potential for joint development through “pooling and sharing”. Due to the signing of the Programme Agreement on cooperation for the development of European Air Transport Fleet (EATF) in May 2011, the opportunities for possible participation in the development of Maritime Surveillance Network and Commercial Satellites development programmes have been examined.

The Weimar Initiative promoting a comprehensive approach to the EU Crisis-response planning missions and operations, development of the European defence capabilities, increased use and effectiveness of the EU battle groups, and enhancement of the cooperation with NATO was supported by the MoD.

Main dimensions for a possible future development of the EU battle groups are integration of the civil-military expertise, sharing the strategic resources (strategic airlift, satellite communications, *etc.*) and synchronization with the NATO Response Forces. The activities in the “Athens” mechanism review, aiming at the enlargement of the possibilities for common financing, were of a great importance.

After successful training and certification, since July 1, 2011 a Bulgarian contingent and staff officers took a 6-month period of duty within the EU multinational battlegroup HELBROC. Besides the representatives of Bulgaria, Greece, Cyprus and Romania, for the first time - in this year’s schedule - Ukraine was also participating.

The MoD was actively participating in the discussions on the establishment of permanent EU capabilities for planning and conducting civil-military crisis response operations which led to the decision of the Council of the European Union to activate the EU Operations Centre for coordination in the Common Security and Defence Policy activities, and counter piracy in the Horn of Africa’s region, in particular.

5.2. NATO – COLLECTIVE DEFENCE AND ALLIED SECURITY POLICY

Significant political events during 2011 were the conducted in May NATO Parliamentary Assembly Spring Session in Varna, with the active participation of the MoD, and the visits of NATO Deputy Secretary General and the Supreme Allied Commander Transformation.

On September 27, 2011 at an official ceremony, a Declaration on the implementation of the Plan for Integration of the Bulgarian Armed Forces in NATO was signed. The Declaration states that the goals set in the Plan for Integration of the Bulgarian Armed Forces in NATO were achieved and the criteria for its accomplishment were fulfilled.

A key point was the adopted by the Ministers of Defence Political Guidance on transformation of the defence capabilities and the military implementation of the NATO’s New Strategic Concept. During the meeting of NATO Ministers of Defence in June 2011, decisions on the Alliance’s reform and its adaptation to the new security environment were made, including the introduction of NATO Agencies’ new model of organization and the new Alliance Command Structure. A New Cyber Defence Concept and working Regulations for NATO Deterrence and Defence Posture Review were adopted.

In an environment of an increasing pressure on the defence budgets and high requirements to the defence capabilities, the efforts supporting NATO’s Smart Defence Concept¹² were among the main guidelines in the efforts of the Ministry of Defence. On the basis of the adopted Plan for the Development of the Armed Forces and the Investment Plan-Programme of the Ministry of Defence, opportunities for participation in building defence capabilities projects through multinational innovative approaches were analysed and those of interest for participation were declared.

We envisage participation in six of the 12 declared so-called “first group” projects of the “Smart Defence” initiative – the group of the highest degree of readiness for practical

¹²Smart Defense

implementation, and Bulgaria is a leading nation on one of these projects, namely - Female Leadership Security and Defence Platform. Another significant project reflects the ambition to establish NATO Crisis Management and Disaster Relief Centre of Excellence.

Our participation in already existing multinational initiatives for the development of Allied defence capabilities such as the Strategic Airlift Capability-SAC C-17 Programme, the Air Ground Surveillance programme and the initiative for the establishment of C-27J Spartan User group was still in progress.

NATO's operation in Afghanistan remains one of the main foreign policy priorities and also the most extended large-scale military commitment for our country. At the beginning of the year, a key issue was the situation in Libya and the role of NATO.

5.3. USABILITY OF THE ARMED FORCES

Key criteria among the criteria for usability of the Armed Forces are the percentage of deployability and the percentage of sustainability. Regarding the Land Forces the criteria must cover 50% deployable and 10% sustainable forces engaged in operations. In 2010 were also introduced Air Forces criteria – 40% and 8% respectively.

Up to the present date, the fulfilled sustainability criterion for the Land Forces is defined to be 7,5%, while the ambition is to reach 10% of the personnel. Intensive efforts are invested in the achievement of 50% “usability” of the Land Forces personnel to be deployable. The level reached until now is 34%.

Regarding the Air Forces, indexes were reported to be 20% and 0% respectively, whereas the ambition is to reach the required standards until 2016.

The past two years witness a positive trend of increase in the Armed Forces usability criteria. In 2011, considerable increase in our NATO, EU and UN operations participation was reported.

5.4. INTERNATIONAL COOPERATION

In 2011, the focus of the bilateral and regional cooperation was on the enhancement of the integration processes, trust, transparency in the relations and further peace and stability promotion.

The strategic cooperation with the USA was developed in the framework of the Agreement between the two Governments on Defence Cooperation and played a leading role. In June 2011, a Memorandum of Intent for enhancement the cooperation between the Ministry of Defence and the United States European Command for the training of the Bulgarian Land Forces components and future participation in NATO missions was signed.

High level meetings and political-military consultations were held with leaders and representatives of the Ministries of Defence and the Defence Staffs of Armenia, China, Germany, Georgia, Israel, Italy, Macedonia, Montenegro, Poland, Romania, Serbia, Sweden, Turkey, the United Kingdom and the United states. Approved by the Council of Ministers, coordinated or in a coordination process are agreements and protocols in various aspects of defence with China, Israel, Montenegro, Romania, Serbia, and Turkey.

A significant step in the enhancement of the bilateral cooperation was the signed between the Republic of Bulgaria and Romania Agreement on Trans-border Air Policing within the Integrated NATO Air Defence System. In a process of negotiation is such agreement with Turkey. In progress is the establishment of DANUBE Functional Airspace Blocks between Bulgaria and Romania which is part of the formation of Single European Sky. Draft “Memorandum of Understanding between the Government of the Republic of Bulgaria and the Government of Romania on the mutual support provision by the host country” was also elaborated.

Highly evaluated was the traditional joint tactical exercise with combat firings at Shabla anti-aircraft range with the participation of military formations of the Serbian Armed Forces. The exercise considerably contributed to the promotion of the military operational aspects of the cooperation and the high level politico-military dialogue.

At its final coordination phase are a Memorandum of Understanding between the Ministries of Defence of the Republic of Bulgaria and the Republic of Iraq on defence cooperation and also an Agreement of free of charge provision of learning materials for the training of the Iraq Security Forces. The work on coordinating a Cooperation Agreement with Pakistan was continued. A Memorandum on defence cooperation between Bulgaria and Israel regarding trainings was also coordinated.

A significant part of the regional cooperation was the South-Eastern Defence Ministerial Process (SEDM) which rotational Chairmanship was held by Bulgaria until June 2011. Our country further developed its proposal to host the permanent location of SEEBRIG Headquarters. Bulgaria was approved to be the leading nation in the implementation of two important projects: "Building Integrity in Defence", regarding anti-corruption activities and transparency in order to avoid possible corruption practices and "Female Leadership in Security and Defence Platform".

Due to the implementation of the commitments coming from the Vienna Document 1999, inspections by Belarus and Russia were organized and conducted in our country. Observer missions by Ukraine and the Russian Federation pursuant to the Treaty on Open Skies were held along with inspections by Ukraine in the framework of the Treaty on Conventional Armed Forces in Europe. A Bulgarian assessment visit to Serbia took place due to the bilateral agreement with our western neighbour.

The implementation of the obligations pursuant to the regulatory documents regarding the proliferation of weapons of mass destructions (WMD) and the export control were of a high public importance tasks during the last year. Experts from the Ministry of Defence took part in meetings in the country and abroad reiterating the state-led policy on these issues. The implementation of the commitments in the Chemical Weapons Convention, the Biological and Toxic Weapons Convention and the Export Control Law was done.

On October 1, 2011 the Convention on Cluster Munitions went into force. In order to implement its requirements, a preparation of national report to the UN Secretary General was initiated, regarding the existence of armaments and munitions in the country that should be demolished within the specified terms.

6. DEFENCE SUPPORT AND PROVISION

6.1. INTELLIGENCE

The main efforts of the Military Information Service were directed towards: provision of information on the development, the regulation and the management of politico-military, political and economic crises and the prevention of local and regional conflicts; timely and reliable information support of the Government and the Armed Forces for effective participation in the process of NATO and the EU defence policy shaping and control of the national military contingents participating in NATO, EU and UN missions and operations; leadership of the intelligence structures of the Service within the contingents participating in missions abroad; Bulgarian Armed Forces' intelligence coordination; cooperation and information exchange between Bulgarian and NATO and the EU intelligence structures and partner services; supporting the Ministry of Defence in the implementation of the military diplomacy and cooperation; improvement of the managerial practices in a situation of increasing needs and resources deficit.

Priority subjects were the politico-military changes and the development of the situation in the Western Balkan states, Northern Africa and the Middle East, and Afghanistan; the tangible

changes in the situation of the countries with deployed Bulgarian contingents; the activities of the terrorist organizations and other asymmetric risks and threats.

For the needs of the Government and the military leadership were developed thematic bulletins, a relevant information was provided and inquiries on current issues were made. In order to update the directions of the Bulgarian Foreign Policy, on request by the Ministry of Foreign Affairs and the State Agency for National Security, analyses, reports and inquiries on the situation in crisis regions, and the asymmetric security threats were done.

Of a special value is the Military Information Service activity on the provision of intelligence information to our contingents participating in missions and operations abroad. Training documentation was elaborated and implemented in the Land Forces which enhanced the quality of the trainings, synchronization, interaction and the use of the Bulgarian Army intelligence structures in missions and operations. The quality of the reports, the informative documents, the references on the situation in the operation areas; the special reports on the direct threats against security of the Allied and National Forces participating in operations; and the newly established sources of information in Afghanistan, Bosnia and Herzegovina and Kosovo was greatly improved.

6.2. COMMUNICATION AND INFORMATION PROVISION

The goals set in the communication and information provision were achieved under the conditions of financial constraints and reorganization of the communication and information support units. Due to the newly improved structure of the units for communication and information provision of the Ministry of Defence and the Armed Forces which enter in force on 01.07.2011, the functions of the relevant units were redistributed. From a structure model orientated to the support of the existing systems, transition took place to a model orientated at functional competence. The responsibility for the use of the newly built System for exchange of military communication was taken by the Stationary CIS.

The efforts were directed to finding ways of cost reduction of the information technologies maintenance in the Ministry of Defence and the Bulgarian Armed Forces and to consolidation of the basic applicable systems used by the Bulgarian Armed Forces aiming at reduction of the maintenance costs of the used databases and optimization of the use of hardware. NATO Consultation, Command and Control Agency (NC3A) delivered systems for joint and operational planning, simulation and cyber defence, some of which are in a process of negotiation.

In 2011 the communication and information system of the Joint Forces Command and the contingents of the Armed Forces worked properly, met the requirements of the Command and Control System and provided the necessary constant information exchange. The active collaboration with state and ministerial agencies on classified information protection continued to develop actively.

The automated exchange of classified information was guaranteed through the use of the accredited cryptographic networks and the automated information systems.

6.3. LOGISTIC SUPPORT

Logistic support in 2011 continued to operate in financial and material resources' shortage environment. Despite that, the main tasks of the training plans were successfully implemented. The efforts of the logistics at all levels were focused on the provision of training and participation of our contingents in missions abroad, the training of the military formations on the territory of the country and optimization of the functions, tasks and the interface in logistics after the performed organizational, personnel and structure changes since July 1, 2011.

There was a certain delay in the implementation of procurement procedures on the provision of the contingents with materials due to the sub-legislative basis regulating the relationships in products and services delivery. In this sense, updating the legal regulatory basis on

logistics and maintenance of the Armed Forces was our priority. Joint Guidelines of the Chief of Defence and the Permanent Secretary of Defence were elaborated.

Key task was the formation of logistics capabilities for provision of Battalion Battle Groups. Draft Concept for formation and employment of National Support Element for battalion battle group provision was developed.

Main task was the disposal of the surplus amount of material resources within Armed Forces military formations and structures directly subordinated to the Minister of Defence. Additional lists of excess material resources of general utility and surplus weapon systems, ammunitions, explosives, pyrotechnical products of the Bulgarian Armed Forces as of June 25, 2011 were developed and approved.

In 2011 Bulgaria was the leading Nation of the NATO Movement Control Multinational Integrated Logistic Unit. The accession procedure of the United Kingdom and Northern Ireland, the USA and the Czech Republic was finalized. Poland accession to the unit was launched. A procedure for obtaining a mandate in order to be declared the unit participation in NATO's operation in Kosovo was initiated.

Successfully implemented were the planned tasks on medical provision, annual medical examination of all categories of military and civilian personnel, assessment and improvement proposals of the health status of the personnel.

The Military Medical Academy participated in the medical support of 130 events organized by the Ministry of Defence and the Defence Staff to the interest of the troops. A key task was the provision of medical support for the Bulgarian units participating in peacekeeping operations in Bosnia and Herzegovina and Afghanistan – Role 1 (Level 1) – 4 doctors and 3 sanitary instructors. 89 medical experts participated in missions during the period.

There is a tendency for an increasing number of medical personnel in Afghanistan and development of the variety of the courses due to the enlargement of the scope of tasks set. The Bulgarian medical contingent implements its tasks at the necessary level; still, due to the lack of experts within the Military Medical Academy, it will be necessary to perform an expanded selection of personnel from the Reserve in the future.

6.4. DEFENCE INFRASTRUCTURE

Management of state properties in operational military areas and excess properties, investment policy regarding construction and construction services, and housing policy were the directions in which the activities in the area of Defence Infrastructure were carried out.

During the last year successfully accomplished were tenders for the sale of 26 properties for 7 419 508,40 BGN, with the initial tender price of 4 581 900,00 BGN. In comparison, the revenues from the property sale in 2010 were 3 992 639, 21 BGN which means that in 2011 the amount is 3 426 869,19 BGN more.

The acceleration of the process of releasing the surplus property by the Ministry of Defence is a priority but the unfavourable situation on the real estate market delays the process. This situation necessitated placing the properties at agencies' and municipalities' disposal.

The Council of Ministers adopted resolutions on granting 37 properties of the MoD. There was an agreement to place 14 of the properties in accordance with Article 17, paragraph 2 of the State Servants Act. Decisions of the Council of Ministers were also made on the status change of 59 public state properties which were turned into private state properties, and also on the execution of sales, in accordance to which 194 private state property tenders launched to the amount of 73 727 453,00 BGN initial price.

The investment policy in the construction and construction services was implemented on the basis of a Property list for construction and construction services of the Ministry of Defence for 2011, which was further amended and approved. Accordingly the construction of 12 buildings was

accomplished and visa for the design of another 15 objects was issued. 48 construction authorizations were given to buildings with approved investment projects; 16 buildings were approved by draft protocol, while 14 properties obtained letting licenses.

The normative basis regarding housing policy was improved. The Ordinance on property renting from the MoD housing fund and the Ordinance on selling properties, studios and garages in populated places with lacking MoD and Armed Forces' structures was updated. A Concept for management, control, and exploitation of housing fund properties was also developed. Main task was the sale of the housing fund properties in populated places with no MoD structures. Preparation for the sale of 184 properties was conducted, 46 of which were sold.

6.5. MILITARY STANDARDIZATION, CERTIFICATION AND CODIFICATION

371 draft projects of NATO standardization documents were entered into the STANDARD system. National responses for the ratification of 57 NATO Standardization Agreements (STANAGs) were sent along with national responses confirming the application of 70 STANAGs. 68 STANAGs were sent for ratification to the competent structures of the Ministry of Defence and the Armed Forces. The distribution of 290 NATO Standardization Agreements through STANDARD Information System was organized.

Certification and supervision of two defence products was performed. Certificates for 25 quality management systems in accordance to the requirements of NATO Allied publications were issued. Certification of the airworthiness of 31 military aircrafts and 3 aircrafts of the Ministry of Interior was implemented.

Agreements on the use of BULCODE software codification instrument in the Republic of Serbia and in Montenegro were concluded in 2011 along with training of their experts. Moreover, an agreement with the Republic of Albania for the use of BULCODE software has being coordinated. The quality of the software is recognized as one of the best in the Alliance.

7. CONCLUSIONS

Based on the presented status on Defence and the Armed Forces the following conclusions could be made:

1. The Armed Forces are able to implement their constitutional commitment to guarantee the sovereignty and territorial integrity of the country and contribute to collective defence system, support international peace and security and assist the population in disaster relief and crises management.
2. Due to the effective prioritization of the limited resources, the military formations accomplish the main tasks on defence, undergo combat trainings in accordance with the set timelines, maintain the existing and build up the planned capabilities, and successfully participate in NATO, EU and UN missions and operations.
3. Due to the passed laws, the defence legal and normative basis was improved, which enables the transformation of the Armed Forces.
4. The tasks underlying in the Armed Forces Development Plan were successfully conducted. The reorganization of the strategic and operational level of the Command and Control System was accomplished. Conditions for unified control of the troops and forces in peacetime and crisis time and conditions for the conduction of the reforms on tactical level reforms in 2012 were established.
5. The anti-corruption activities maintain a steady trend towards generally low risk level. The achievements in this area are stable while the comprehensive control of the activities of all structures is broadened and deepened. Transparency is indispensably adhered as a principle and

instrument for civilian control and for informing community on important political and resource decisions made in the area of defence.

6. Dissatisfactory are the results in the following areas: procurements and deliveries; disposal of excess real estates, properties, armaments and equipment, and disposal of the excess munitions.

7. The results in 2011 bring us forward to the implementation of the desirable goals, set in the White Paper on Defence and the Armed Forces and the Armed Forces Development Plan. The provision of defence subsidies below the level of 1,5% of GDP, however, is a serious challenge for key projects laid in the Investment Plan-Program of the Ministry of Defence until 2020.

8. WHERE TO FOCUS OUR EFFORTS

The dynamic and difficult to predict strategic security environment with prevailing asymmetric risks and threats and the steady defence budget constraints for the Euro-Atlantic community states will continue. In order to improve its defence capability, Bulgaria should integrate, augment its defence capacities and be adequate for the risks and threats of the 21st century.

Drawing on the results achieved in 2011, 2012 will be year of “upgrading” the defence capabilities through the development of all of their imperatives.

The structures of the integrated operational level are scheduled to achieve full operational readiness in 2012. At the same time, these structures should control the units’ transformation at tactical level and provide the defence level of ambition.

The Land Forces reorganize the light infantry brigade and the mechanized brigades, and a United Centre for Initial Preparation is being formed. The size of the mechanized brigades has been considerably increasing. Under reorganization are also artillery and reconnaissance, engineering and CBRN units. Five units within the Air Forces have been reorganized, as a result of which has been established a Command, Control and Surveillance Base and six anti-aircraft units have been disbanded. Reorganization in the Air Bases has also been envisaged. Three formations from the Navy have been reorganized.

In order to implement the planned transformations in the tactical units, it is important to organize and apply the Law on the Reserve of the Armed Forces of the Republic of Bulgaria.

A key task is the training of the battalion battle groups. They implement the new conceptual approach to warfare. In accordance to the White paper on Defence and the Armed Forces and the Armed Forces Development Plan in 2012 have to be certified the first battalion battle group and a battalion battle group in accordance to the NATO Armed Forces’ Purposes.

Regarding the doctrines, 2012 is devoted to the elaboration and the practical implementation of the main doctrines, to the work on the supportive doctrines and the tactical documents. Until 2014, the Armed Forces will avail of fully developed doctrinal basis and working process for their support.

In the area of education and training NATO Crisis Management and Disaster Relief Centre of Excellence holds a central place. This year the centre is planned to take an active role in training, courses conducting and international education. The Centre is part of the “Smart Defence” projects.

Bulgaria is a leading nation in the “Female Leadership in Security and Defence”, part of the first group “Smart Defence” initiative projects and in 2012 will held the first conference with broad international participation.

In the area of Regional cooperation should be emphasized on the Sixth Conference of the Chiefs on Defence of the Balkan countries which will be hosted by Bulgaria.

In the main focus of our attention is the comprehensive provision of the contingents abroad, the rotations and the immediate resolution of arising equipment issues in mission areas. The practice of sending to operations permanently employed personnel and units manning in

accordance with long-term schedule will continue. On equal basis this includes, the military personnel of the MoD and the HQs participating in Afghanistan, Bosnia and Herzegovina, Kosovo and the regions where contingents are needed. This approach improves the selection and the trainings.

In 2012 starts the implementation of the Strategy of transforming the contribution to the NATO operation in Afghanistan until 2014 which envisages gradual decrease of our ISAF contingents.

The care for the people in defence will remain crucial to our efforts as they are the most important capabilities' imperative. Commanders and HQs will have to direct their work at the improvement of the military service, preventive actions to avoid accidents and recurrent security control, access regime, military conduct and discipline. Special attention will be paid to the selection, motivation, provision, education and training, career development and the professional realization of the personnel. Our goal is to keep the social status despite the limited resources, and looking for opportunities for better it/improve it.
